

GCSE Design Technology

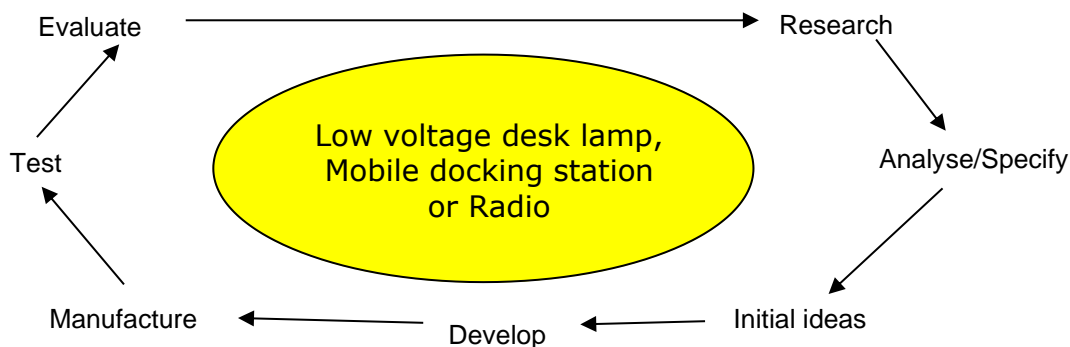

A qualification in Design & Technology is a key to open many doors in your future!

Throughout life we encounter problems/situations/puzzles both in our work life and home life. In Design & Technology we develop the processes and skills needed to overcome these challenges, creatively and successfully. In addition to this if you are the sort of person who likes to create new things or design and develop ideas, then this is the subject for you.

We have a range of courses available to us from different examination boards including BTEC's, GCSEs and VCert's which all hold the equivalent value at level 2. This gives us the opportunity and flexibility to choose the right course for our students in order to achieve the best outcomes for them. The courses all combine coursework and an external assessment to achieve the overall qualification.

Often there will be a series of projects used to teach the different material required for the course, for example: The Design museum would like you to design and make a prototype for one of the following - Low voltage desk lamp, Mobile docking station or Radio

So what's my next step?

A qualification in Design & Technology can lead onto a broad range of courses; A-Level Product Design, BTEC in Construction or Engineering, Degrees in Architecture or Design. These can then lead on to careers in a wide range of areas.

For further information please see Mr Ebsworth or watch the video on the school website: [Year 9 Choices | Stafford \(staffordmanorhighschool.com\)](http://www.staffordmanorhighschool.com)
